In 1969, Hunter "Patch" Adams after developing suicidal thoughts admits himself to a mental institution. Once there, he finds that using humor, rather than doctor-centered psycho-therapy, better helps his fellow patients and provides him with a new purpose in life. Because of this, he

wants to become a medical doctor, and swiftly leaves the facility. Two years later, he enrolls at a medical school, as the oldest first-year student. He questions the school's soul-less approach to medical care, particularly why students don't work with patients until their third year, as well as the methods of the school's Dean Walcott, who takes an instant disliking to Patch. Adam believes that doctors must treat patients his way and not befriend them. Because of this and incidents such as setting up a giant model papier-mâché pair of legs in stirrups during an important meeting, he is thrown away from the medical school, although he proved that his unconventional methods often improve his patients' physical and mental health. Adams encourages medical students to work closely with nurses, learn interviewing skills early, and argues that death should be treated with dignity and sometimes even humor.

Patch begins a friendship with fellow student Fisher and, during their third year as medical students develops his idea for a medical clinic built around his philosophy of treating patients using humor and compassion. With the help of Arthur Mendelson, a wealthy man who was a patient whom Patch met while in the mental hospital, he purchases 105 acres to construct a hospital. With some friends' help, Patch turns an old cottage into a clinic. When they get the clinic running, they treat patients without medical insurance and perform comedy drawings for them.

Walcott eventually discovers that Patch has been illegally running a clinic and practicing medicine without a license and attempts to expel him again because of this, as well as complaints that he has made his patients uncomfortable (which is obviously not true). Desperate to prove Walcott wrong, Patch files a lawsuit with the state medical board on the advice of his former medical school roommate, conservative Mitch Roman. Patch succeeds in convincing the board that he must treat the spirit as well as the body. The board, although they still find some of his methods very unorthodox, allows him to graduate and he receives a standing ovation from the packed hearing room.

At graduation, Patch receives his Doctor of Medicine and, bowing to the professors and audience, reveals himself to be naked underneath his cap and gown.

【III】素養題目:

Daylight saving time DST is the practice of setting the clock forward by one hour during the warmer part of the year, so that evenings have more daylight. Most areas of the United States and Canada observe DST. It starts on the second Sunday in March and ends on the first Sunday in November, with the time changes taking place at 2:00 am local time. That is, in springtime the clocks are moved forward from 2:00 am to :00 am and in fall they are moved back from 2:00 am to 1:00 am.

The main purpose of DST is to make better use of daylight. According to studies done by the US. Department of Transportation, DST saves energy. It curtails the entire country’s electricity usage by a small but significant amount, about one percent each day, because less electricity is used for lighting and appliances.

However, ever since the institution of DST, there has been controversy regarding whether it accomplishes its goal or not, and if so--- at what cost. Scientists have argued that the time change is linked to changed in our health and may even make us more accident-prone. According to the researchers of the Center for Sleep Medicine, gaining or losing an hour will affect sleep patterns, often for about 5 to 7 days. This influence may lead to people’s struggle with memory, learning, and overall cognitive performance.

According to a study led by University of Colorado, when Americans lose one hour of sleep in the spring, the risk of heart attack increases by 25%. It is also suggested that turning the clock ahead or behind an hour could increase the risk of stroke.

Many have also studied the time change’s impact on vehicle crashes and fatalities. Researchers have found an increase in car crash deaths on the Monday after the switch to DST in the spring. Scientists caution people to remain aware while driving or walking near a road,

especially early in the morning or late at night, after the change.

There are negative health consequences to using DST, with very little benefit. To improve human health, we should not fight against our body clock. So, when “falling back” tonight, let’s hope that one day we will never have to “spring forward” again.

69. Which is the closest in meaning to the word “curtail” in the second paragraph?

- (A)scold (B) invent (C) consider (D)reduce

70. Which of the following description can be inferred from the passage?
- (A) The author is quiet fond of the DST.
  - (B) The author writes the article in November.
  - (C) The government is determined to abolish DST.
  - (D) Most people think DST do less harm to their life.

71. Which paragraph gives readers advice on how to deal with DST?

72. Which paragraph shows the author’s stance on DST?

Fill in the blanks according to passage: DST
