People usually don't like mice, but one mouse is one of the most famous movie stars in the world. His name is, of course, Mickey Mouse. Mickey Mouse sailed into our lives on November 18, 1928. There are several different stories about 24.

One night, when Walt Disney was drawing, he suddenly heard a strange sound. The sound was from the waste basket, and Walt saw a family of mice 25. bread. Walt liked one little mouse better than any of the others. This little animal gave him some new ideas for his drawing.

Another one is Walt and his friend Ub Iwerks lost their business as animators. They needed a new star, so Walt and Ub started drawing different animals: a dog, a frog, a horse, and a cow. Walt started off as an animator but hadn't drawn in years. After he tried his hand at a mouse, it was tall and looked strange. Because Ub kept drawing, he easily drew a mouse. Finally, he finished Micky Mouse.

We will probably never know the whole truth. The two great people brought us so much joy. Ub Iwerks was responsible for the drawing of Mickey, but it was Walt Disney, 26. gave Mickey his soul.

Coral reefs,  
 Beautiful rainforests of the sea,  
 Covering less than 1% of the ocean,  
 Are safe homes to different kinds of fish and green sea turtles.

Corals may look like plants,  
 But they are animals.  
 Algae, which is also an animal,  
 Grows on and around a coral reef.  
 Algae is beneficial to corals.  
 They not only provide corals with food,  
 But also make coral reefs colorful.

Coral reefs grow very slowly,  
 Only about 2 cm a year.  
 A giant one might be one thousand years old.  
 They *are* important to the sea,  
 Because they can protect sea life,  
 And they help clean the sea water, too.  
 People around the world can't do without them,  
 Because they need to eat fish.

Sadly,  
 Because of warming waters from climate change,  
 19% of the world's coral reefs have been lost;  
 15% are dying, too.  
 If we don't take action now,  
 It will be too late to save the precious parks under the sea.

31. What does is beneficial to mean?  
 (A) Is scared of. (B) Is helpful to. (C) Hunts for. (D) Hides away from.  
 32. What are coral reefs NOT compared to in the poem?  
 (A) Rainforests. (B) Cities. (C) Parks. (D) Homes.  
 33. Which is NOT said about coral reefs in the reading?  
 (A) Why they are rich in colors.  
 (B) What climate change has done to them.  
 (C) How many types there are.  
 (D) Whether they are plants.

Last week, Jim and four of his classmates discussed ways to save energy in their homes. Then they made the following poster together.

### Saving Energy in the Home

1. Turn off the lights when you don't need them. Also turn off the computer before going to bed.
2. Cook with the lid on the pan. By doing this, you will not only save energy but also cook food more quickly.
3. Check the faucets at home. Repair leaky faucets as soon as *possible*, so you don't waste a lot of water.
4. Open the refrigerator door only when you are going to get something. Never open the door too often or leave it open. Both will consume more electricity, and you'll have to pay more money for it.
5. Use less paper. It is better to use both sides of the paper. Also use fewer paper towels in the kitchen.
6. Taking a shower uses less water than having a full bath. In fact, taking a short shower is one of the easiest ways to save water in the home.

- ◆ Be friendly to Earth!
- ◆ Save energy Save money. Save the planet.
- ◆ Go green.

34. What is the purpose of this poster?
- (A) To tell readers how to save energy in working places.  
 (B) To share why it is important to save energy.  
 (C) To show readers how much energy can be wasted in a home.  
 (D) To ask readers to take action to save energy in everyday life.
35. What does consume mean?
- (A) To use. (B) To lose. (C) To save. (D) To make.

Air pollution is getting serious in almost every part of the world. Buses and cars that run on gas make the problem worse. Because of the dirty air, a lot of people get sick or even die. Something must be done to deal with the problem before it is too late.

Some countries in the world are now trying buses that run on biofuel. Take the UK for example. In London, a new kind of biofuel that is made from coffee waste has been used to help power some of the city's buses. The following is how the biofuel is made.

Using coffee oil to make biofuel is a clever idea because as long as people drink coffee, there will always be coffee waste. A study shows people in London drink about 5.5 million cups of coffee every day. Besides, buses that run on such biofuel are more friendly to the Earth than those that run on gas.

In London and other big cities in the world, the air is already dangerous for people with poor health. Clean fuels, like coffee oil, may widely be used to fix the air problem in the future. Until then, many more studies and tests are still needed.
